

DEV_IMPL_GUIDE - FE-APP-02 Outdoor Sales Franchise App

1. Implementation Objective

Implement the outdoor sales/franchise app for lead capture, territory work, HomePass/package lookup, customer/order capture, payment handoff, document upload, and order status tracking.

2. Start Here

Read these first:

1. FE-APP-00-Frontend_Architecture_and_Shared_UX_Foundation-v1.0.md
2. FE-APP-02-Outdoor_Sales_Franchise_App-v1.0.md
3. DD_SALES-01-Lead_Territory_and_Franchise_Sales_Management-v1.0.md
4. DD_EM-01-Franchise_Management-v1.0.md
5. DD_FUL-02-Order_Capture-v1.0.md
6. DD_ILM-CFG-01-Customer_Service-v1.0.md
7. DD_RLM-CFG-01-HomePass_Configuration-v1.0.md
8. DD_SIP-01-Package_Management-v1.0.md

3. Build Order

1. Implement login, operator/franchise context, and territory assignment display.
2. Implement lead capture and follow-up through SALES-01.
3. Implement HomePass/serviceability search through RLM.
4. Implement package selection through SIP.
5. Implement customer/KYC capture through ILM and file storage.
6. Submit converted order to FUL-02.
7. Show payment instructions/status through BIL/PAY-GW.
8. Show order status from FUL-02.
9. Add offline draft support only for lead/order draft data, never for committed business state.

4. MVP Scope

Start with lead capture, serviceability check, package selection, customer/order capture, payment handoff, and order status. Advanced commissions, complex campaign logic, and territory optimization are later scope.

5. Tests

- Lead creation and conversion to order.
- Duplicate lead/customer handling.
- HomePass unavailable path.
- Offline draft save/resume.
- Payment status refresh.
- Order submission idempotency.

6. Screen-To-API Wiring

Screen	Owning module API	Calls
Login/context	FOUNDATION_AUTH, EM-01	OIDC login, current franchise/territory lookup.
My territory	SALES-01, EM-01	assigned territory, franchise boundary, lead list.
Lead capture	SALES-01	POST /api/sales/leads, PATCH /api/sales/leads/{lead_id}.
HomePass search	RLM-CFG-01	serviceability/homepass search by GPS/address/reference.
Package selection	SIP-01	active package list for operator/region/channel/homepass capability.
Customer/KYC	ILM-CFG-01, FOUNDATION_FILE_STORAGE	customer create/search, contact methods, KYC file upload.
Order submit	FUL-02	order capture submit/validate/status.
Payment handoff	PAY-GW-01, BIL-01-PAY-01	active channel instructions and payment status.
Order tracking	FUL-02	order status/timeline by order id.

7. Offline Draft State

Store only sales drafts locally:

```
type SalesDraft = {
  localDraftId: string;
  leadId?: string;
  status: "DRAFT" | "READY_TO_SUBMIT" | "SYNCING" | "CONFLICT" | "SUBMITTED";
  customer: {
    fullName: string;
    phone: string;
    idNumber?: string;
    preferredLanguage?: string;
  };
  location: {
    gps?: { lat: number; lng: number; accuracyM?: number };
    addressText?: string;
    selectedHomepassId?: string;
  };
  packageRef?: string;
  accountIntent: "NEW_ACCOUNT" | "EXISTING_ACCOUNT";
  attachments: Array<{ localUri: string; filePurpose: "ID" | "PROOF_OF_ADDRESS" | "OTHER" }>;
  idempotencyKey: string;
  updatedAt: string;
};
```

Never store committed customer/account/subscription state as truth. After sync, reload the created order/customer/account from ILM/FUL APIs.

8. Flow - Lead To Order

1. Sales agent creates or updates a lead in SALES-01.
2. App checks serviceability through RLM-CFG-01 using GPS/address/homepass reference.
3. App loads eligible packages from SIP-01 for operator, region, channel, and HomePass capabilities.
4. App captures customer/KYC data and uploads documents through FOUNDATION_FILE_STORAGE.
5. App submits order to FUL-02:

```
POST /api/orders
Idempotency-Key: sales-order:{localDraftId}
Content-Type: application/json

{
  "operatorCode": "WIK",
  "salesChannel": "OUTDOOR_FRANCHISE",
  "franchiseId": "fr_001",
  "leadId": "lead_01HZ",
  "customer": {
    "fullName": "Mary Wanjiku",
    "phone": "+254700000001",
    "preferredLanguage": "en"
  },
  "account": {
    "accountLabel": "Home",
```

```

    "billingAddress": "Karen, Nairobi"
  },
  "homepassId": "hp_01HZ_NRB",
  "packageRef": "pkg_wik_gpon_100m_res",
  "kycDocumentRefs": ["file_01HZ_ID"]
}

```

6. FUL-02 returns order id and status.
7. App shows payment instructions from PAY-GW-01; it does not hardcode M-Pesa text.
8. App tracks payment/order status through FUL-02/BIL/PAY-GW APIs.

9. Conflict Handling

Conflict	UI handling
Duplicate phone/customer	Show matched customer candidates from ILM; agent chooses reuse or continue with supervisor permission if allowed.
HomePass became unavailable	Mark draft CONFLICT; force serviceability refresh and package revalidation.
Package retired while offline	Mark draft CONFLICT; reload SIP packages and require new selection.
Order idempotency replay	Show existing order returned by FUL-02; do not submit a second order.
