

Sophix V3 Implementation Guide Coverage Audit

Date: 2026-06-01

Status: Complete after missing-guide patch and superseded-document exclusion

1. Summary

Implementation-facing DD/frontend documents were checked for paired DEV_IMPL_GUIDE files.

Area	Result
Implementation-facing source documents checked	123
Source documents with implementation guides	123
Implementation-facing documents in distributed PDF pack	122
Distributed documents with implementation guides	122
Missing implementation guides after patch	0
Control/reference documents that do not require guides	HLD, process map, analysis reports, index/control docs, generated audit documents

The source repository still retains the superseded DD_EM-02-Contractor_Team_Agent_Registry pair for traceability. The distributed PDF pack excludes that superseded pair and includes only the canonical DD_EM-02-Contractor_and_Staff_Registry pair.

2. Guides Added In This Pass

3. Rule For Future DDs

Every new implementation-facing DD must include a paired DEV_IMPL_GUIDE before it is added to the review pack.

General architecture/control documents do not require implementation guides, but should be included at the root of the PDF pack.
